Narrative Summary: For background on this site and previous ATSDR comments, refer to the Date Feb. 21, and May 17, 1991 Health Consultation. EPA asked ATSDR to further clarify whether occasionally playing ball on property adjacent to the PAH contaminated area or whether children using the area as a short cut to school would pose any health concerns.

Our previous recommendations was to prevent chronic repeated exposures of small children who might want to play in the area of pooled water. We were not concerned that occasional contact that might occur as a result of retrieving a ball or wading through the pooled water areas would pose a threat. ATSDR had previously recommended restricting access to areas of pooled water and associated sediments which were

contaminated with elevated levels of PAHs. This area was adjacent to the outfield area of the ball-field. Other areas of the site were not contaminated.

Action Required/Recommendations/Info Provided: Maintain vegetated cover and restrict use of the contaminated area until other permanent measures are implemented.
